
Mechanical load-dependent brake force regulator

The unique solution for the requirements imposed by regulation EU 2015/68

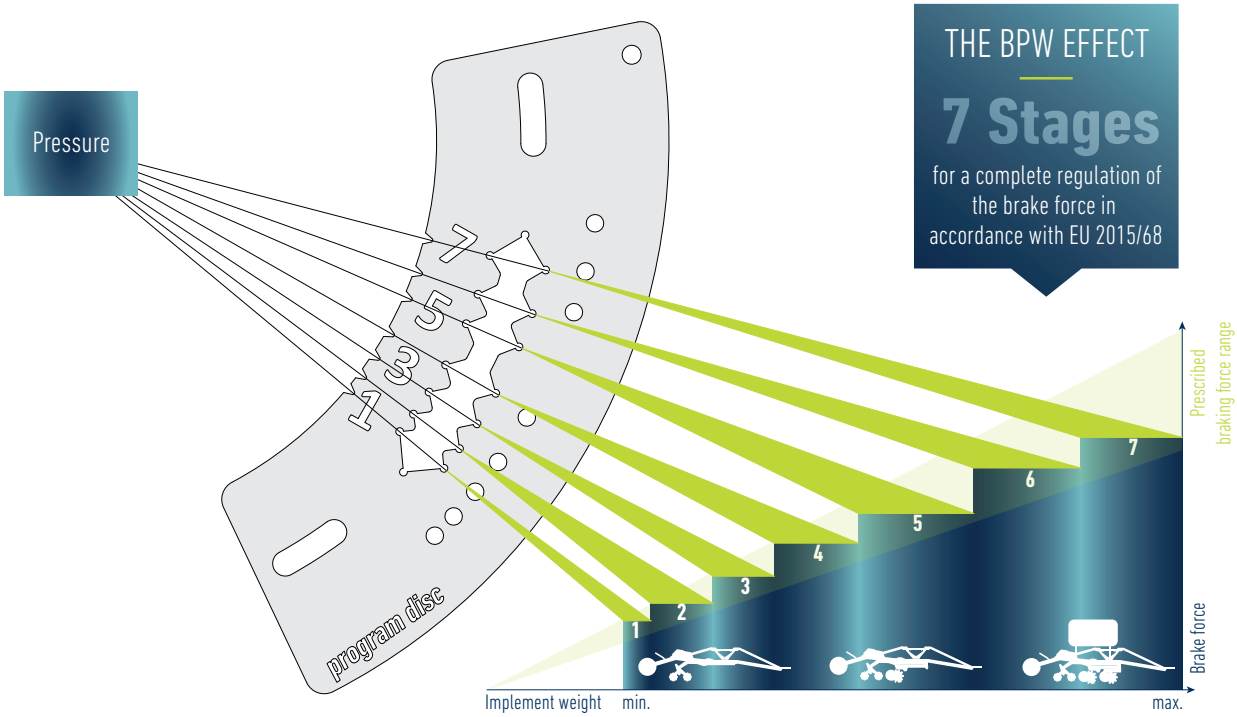
Mechanical load-dependent brake force regulator (MLB) for adjusting the pressure values during the brake actuation of unsuspended trailers.

The brands of the BPW Group:

we think transport

Mechanical **L**oad-dependent **B**rake force regulator

Functional description



Benefits that convince

Wide range of applications
Suitable for all unsuspended agricultural trailers up to 30 or 40 km/h that, for technical reasons, can not be equipped with a self-acting load-dependent brake force regulator.

Outstanding efficiency
With a brake system equipped with an MLB , an entire vehicle series (different versions with different vehicle weights and tyres) can be covered and homologated.

EU compliant
Complete fulfilment of the prescribed compatibility requirements for proportional pressure control.

Easy operation
Safe and simple adjustment of the stages due to the special square holes.

Customisation
The program disc can be adapted to the individual requirements of the vehicle manufacturer.
